Abstract state connection
Near: $\xi = 0$
Far: $\xi = \theta_X(s)$
Retained RX
$x,\ Q,\ z$
$H_{RX} = H_N + H_C + H_R$
New receiving field
$\zeta \in Y$
$H_G = \beta_G \|\zeta\|_Y^2/2$
a
$u_+ :\ \partial_t u_+ + \partial_\xi u_+ = 0$
c
$E_{tr} \geq 0$ | ξ is time / age
b
$u_- :\ \partial_t u_- - \partial_\xi u_- = 0$
d
$\dot{H}_{RX} = -P_N$
$\dot{E}_{tr} = P_N - P_G$
$\dot{H}_G = P_G$
Indexed by (s, X); no ambient path or physical aperture flux is drawn.
