

Existing finite patches

$$\mathcal{P}_j^\varepsilon \longleftrightarrow (j, j + \varepsilon)$$

$$R : (j, \varepsilon) \mapsto (j + 1, \varepsilon)$$

$$S : (j, \varepsilon) \mapsto (-j, -\varepsilon)$$

Exact regular S_3 -set
with its three-pair quotient

The same finite incidence occurs
for every smooth cubic modulus.

No branch divisor is selected.
